Background and methodology

The following summary report is intended to inform the reader about the context, reliability and primary observations arising from ICM's survey of Muslims on behalf of the Policy Exchange (PX).

It follows a similar, but less sizable ICM survey of Muslims conducted for Channel 4 television in the spring of 2015, and published in early 2016. At the time of the C4 programme¹, informed observers described the ICM methodological approach as the most robust survey of Muslims² for a number of years, but we should also recognise that the methodological solution adopted and replicated for Policy Exchange, while of the highest possible class in practical terms, is not perfect (no survey ever is) and as such is always likely to be subject to some critique.

According to the 2011 Census, the Muslim population accounts for 4.8% of the adult population in Britain. However, individuals' religious affiliation cannot be separately identified on any existing comprehensive sampling frame. As such, when conducting research among this audience screening is required to identify eligible respondents – that is, approaching potential participants and ascertaining whether they are eligible for the survey or not (in this case, whether or not they self-identify as Muslim). However, to screen for such a low-incidence group using a standard nationally-representative random location approach would be both extremely time-consuming and very expensive, as fewer than one in twenty will be eligible.

Therefore, ICM conducted a random location, quota-based sampling approach, with locations selected from all of those where the Muslim population accounts for at least 20% of the total population. This ensured that one in five would be eligible. Why did we choose the 20% minimum threshold? A full scale random location methodology which includes areas with very few Muslims living in them would have been practically impossible given reasonable cost restraints. Slightly more than 50% of British Muslims live in the areas we surveyed, and we believe that the 20% threshold was a compromise that was superior to others that could have been taken, as indeed they have to be on every survey that is ever conducted.

Having established what the eligible universe looks like, ICM used Lower Super Output Areas³ (LSOAs) as the Primary Sampling Unit. ICM analysis shows that there are 2,014 LSOAs with a penetration of at least 20% Muslim residents, and that these areas cover c.1.4 million Muslims – or 51% of Britain's Muslim population, as outlined in Table 1.

Table 1: Coverage of Muslim population

Incidence	No of LSOAs	No of Muslims	% of all Muslims covered
10%+	4,209	1,927,416	71.23
20%+	2,014	1,390,280	51.38
30%+	1,092	998,661	36.90
40%+	688	748,997	27.68
50%+	423	530,345	19.60

¹ What British Muslims Really Think, hosted by Trevor Phillips

² Wells, Anthony. UKPollingreport.com *"It's probably the best attempt to poll British Muslims properly that we've seen for several years and, given no one is waiting around the corner with a cheque for a million quid to do a more elaborately sampled poll than ICM's, I think we should probably take this one seriously...."*

³ Lower Super Output Areas are geographical areas covering between 400 and 1,200 households.

60%+	274	383,883	14.19
70%+	150	235,303	8.70
80%+	57	102,893	3.80
90%+	6	12,166	0.45
Less than 10%	30,544	778,650	28.77

Having applied this inclusion criteria, the selection of locations used the following procedure:

- All UK LSOAs with at least 20% coverage of Muslims were stratified by region and within region by local authority. Within this, LSOAs were ordered by size.
- Using a random start and fixed sampling interval, 151 LSOAs were selected, with a proportionate allocation by region. This process produced a sample of LSOAs selected using a probability proportionate to size method, where size of LSOAs is measured by the number of Muslims aged 18+.

A quota sheet was provided for each selected LSOA, based on achieving twenty (20) interviews per PSU. Quotas reflected the actual composition of Muslims in the LSOA according to standard demographic criteria.

Interviewers were required to interview a sample profile that matched that of the population profile in their sampling unit. This ensures that the sample is demographically representative at the micro-level, as well as geographically representative.

The location of the selected LSOAs, by local authority and Government Office region, as well as the percentage of the population which is Muslim, is summarised in Table 2.

ICM Unlimited interviewed a random sample of 3,040 adults aged 18+ who self-identified themselves as belonging to the Muslim faith. Interviews were carried out face-to-face, in-home, in geographical areas in which minimum Muslims incidence was confirmed by Census to be at least 20%. Interviews took place between 19th May and 23rd July 2016, and the data has been weighted to representative of all Muslims by age, gender, work status, region and whether born in Britain or not.

Data based on 3,040 interviews is correct top within +/- 1.78% at the 95% confidence interval. Direct comparisons with the Channel 4 survey on identical questions require top line responses to vary by more than 3.5% to be statistically significant at the same 95% confidence interval.

Table 5.26 (continuation)

Q33. Some people have told us that moderate and mainstream (non-violent) views held by most Muslims can get drowned out within Muslim communities, because a small number of non-violent and violent extremists are better able to communicate what they believe. Other people have told us that extreme views hardly exist within Muslim communities and the problem is exaggerated. Which one of the following do you most agree with? .

Base: All Respondents

Column	Total	Born in Britain		Sense of belonging to Britain		Influence decisions affecting Britain		Use of violence in political protest		Commit terrorist actions as a form of political protest

Table 12

Q20. I would now like you to imagine that you are preparing to send your children to school. To what extent do you agree or disagree with the following statements:

Summary Table

Base: All respondents

		I would prefer to send my child to a school with strong religious values	Girls and boys should be taught separately	Children should be taught art and music at school	Children educated in schools with strong religious values are put at a disadvantage when they enter higher education or employment	A common National Curriculum for all children in Britain would enhance community cohesion	Teaching all children about all faiths in Religious Education lessons would make no difference to community cohesion	Schools should be able to insist on a hijab or niqab being worn as part of the school uniform

Q35. From time to time we all come across so-called 'conspiracy theories', which supposedly explain events in a different way to commonly held beliefs. You may have seen or heard about conspiracy theories about, for example, the attacks on the Twin Towers in New York on 9/11. To what extent do you agree or disagree with the following statements:

Young people are most prone to conspiracy theories

Q35. From time to time we all come across so-called 'conspiracy theories', which supposedly explain events in a different way to commonly held beliefs. You may have seen or heard about conspiracy theories about, for example, the attacks on the Twin Towers in New York on 9/11. To what extent do you agree or disagree with the following statements:

Conspiracy theories do often contain elements of truth

Base: All respondents

Conspiracy Theory Survey

ONLINE Fieldwork : 5th-6th October 2016

Absolutes/col percents

Table 1
Q1. From time to time we all come across so-called 'conspiracy theories', which supposedly explain events in a different way to commonly held beliefs. You may have seen or heard about conspiracy theories about, for example, the attacks on the Twin Towers in New York on 9/11. To what extent do you agree or disagree with the following statements:

Summary Table

Base: All respondents

	Conspiracy theories are started by extremists trying to dupe people into support for their views	Young people are most prone to conspiracy theories	Conspiracy theories do often contain elements of truth
Unweighted base	2009	2009	2009
Weighted base	2009	2009	2009
NET: Agree	841 42%	803 40%	937 47%
Strongly agree	231 11%	211 10%	173 9%
Tend to agree	611 30%	592 29%	764 38%
